Trial Summary:

This is a Phase Ib, open-label, non-randomized study in patients with previously treated advanced ovarian or endometrial cancer (Part 1) and platinum-sensitive ovarian cancer or triple-negative breast cancer (TNBC) (Part 2) to investigate the dose, safety, pharmacokinetics, and preliminary efficacy of rucaparib in combination with atezolizumab. The study is conducted in 2 parts: a Dose-Finding Phase (Part 1) and a Dose-Expansion Phase (Part 2)
